

SIF API changelog

This document describes the functional changes in the SIF API, ordered descending by release date. For details on the functionality, please see the document SIF APIs – Documentation. Please note that the changes prior to November 2018 might be incomplete.

How can you find out which version of SIF you have? From November 2018, you can use the GetSIFVersion-operation in the SupportService. Prior to that, the build version (product version) can be read from the SIF components on the 360° server.

Important Note:

Note 1:

Mandatory pre-requisite for SIF installation for release 1.3.0 and onwards: .Net Framework version 4.8 and .Net Core 3.1

Now SIF has upgraded to support .Net framework version 4.8, it is mandatory to have at least 4.8 framework version and .Net Core 3.1

Customers who are on old versions of 360 specially SP9 updates, need to upgrade their .Net framework version to 4.8 to install new SIF release ie. 1.3.0.

Note 2: Customers who got upgraded to latest 360 mostly 5.6 onprem and uses SIF SOAP or REST services, need to add the binding redirects in respective web.config, to avoid an error "Can not initiate ADContextUser because the context user is empty or invalid".

SIF SOAP Go to SI.WS.Core\SIF\web.config in <runtime> add,

<dependentAssembly>

 <assemblyIdentity name="System.Memory" publicKeyToken="cc7b13ffcd2ddd51"
culture="neutral" />

 <bindingRedirect oldVersion="0.0.0.0-4.0.1.1" newVersion="4.0.1.1" />

</dependentAssembly>

SIF REST Go to SI.WS.Core\SIFREST\web.config and add above mentioned binding redirects in <runtime> section.

If you have any problems, do let us know.

Note 3:

Customers using SIF version (1.5.0 or 1.6.0 or 1.7.0 or 1.8.0) need to upgrade to version 1.9.0, this release contains bugfixes introduced in version 1.5.0 and 1.7.0

If you have any questions, please post in SIF team channel.

Note 4:

SIF 2.0.0 version released with some performance improvements.

Note 5:

SIF 2.1.0 version released includes fix for plugins load issue while calling SIF through process engine.

Build: 1.0.1.32, release date: 2019-02-13

Build: 1.0.1.20, release date: 2019-01-23

Build 1.0.1.4, release date: 2018-12-21

Build 1.0.1.0, release date: 2018-11-30

Earlier builds

Build 6.8, February 2025

Changes included	Affects
Improvements to FileService/DeleteFile endpoint- Removed mandatory property "ADContextUser". Fix bug related to deleting files from case documents.	FileService: DeleteFile
Changes in default handling of AccessGroup for cases and documents. Default Public:0 accesgroup mapping has been removed from /CreateCase and /CreateDocument. They can control the behaviour by settings: ▪ journalweb.inheritaccessgroup - enable or disable inheriting access group from case ▪ journal.defaultjournalaccessgroup - default access group for documents if inheritance is disabled ▪ journal.defaultcaseaccessgroup - Default Access Group for Case.	CaseService: CreateCase DocumentService: CreateDocument
Introduce new property in /CreateCase and /CreateDocument response object. "URL". A 360° relative URL that can be used by authenticated users to view the Case/Document Details.	CaseService: CreateCase DocumentService: CreateDocument

Build 6.7, December 2025

Changes included	Affects
Introduce new method under FileService/GenerateFileVariantsDownloadToken. Generates a download token for all file variants of a specific file version. The ZIP file is stored temporarily and can be downloaded using the FileReference token. Use FileService/GetFile.	FileService: GenerateFileVariantsDownloadToken
Introduce two new methods under SupportService. - GetDocumentTemplateMetadata Return list of document templates uploaded to 360 - DownloadDocumentTemplate Download specific document template. Returns stream content. Refer SIF API documentation for more details.	SupportService: GetDocumentTemplateMetadata DownloadDocumentTemplate
Introduce new property in UserProfile result object - IsLockedForSync Indicates whether this profile is locked and should be excluded from synchronization by integrations. When true, AD sync and user sync integrations must not modify this profile's role assignments.	UserService:GetUsers
Open API definition corrections. - Added relative api path under servers/url - Add datatype to authorization parameters	All services
Bug fix - Pagination not wokring for GetProjects	ProjectService:GetProjects
Updates to DispatchDocuments implementation- Add validation before starting dispatch workflow.	DocumentService:DispatchDocuments

Build 6.6, August 2025

Changes included	Affects
Bug fix: Event Queue - SupportService/WaitForEvents does not return "Events" data when queue is triggered before timeout	SupportService: WaitForEvents
Bug fix: UserService/SynchronizeUser- Not deactivating user profiles that are not in source system but present in 360 without AD lock flag set.	UserService: SynchronizeUser
Bug fix: GetCases - "IncludeStages" doesn't return correct stage information due to change in underlying data model in 360.	CaseService:GetCases

Bug fix: UpdateFile - New file version creation fails when VersionFormat is specified.	FileService: UpdateFile
Extended CaseContactResult and DocumentContactResult to return RoleRecno.	CaseService: GetCases DocumentService: GetDocuments

Build 6.5, May 2025

Changes included	Affects
Delta query support.Delta allows clients to fetch only the data that has changed (created, updated, or deleted) since a specific point in time. This is efficient for syncing or fetching data without retrieving everything repeatedly. Input: A LastDate (datetime) is provided in the request. This represents the last time the client fetched data. Response: ▪ A list of records modified after LastDate. ▪ A NextDeltaLastDate value – the new timestamp clients should use in the next delta request.	CaseService:GetCases DocumentService:GetDocuments FileService:GetFilesWithMetadata
GetAccessGroups enhancements. New filters and output properties have been added to get minimal data through the API. See SIF API documentation for more details. Input: Active IncludeSystemGenerated IncludeCustomGroups IncludeDistributionGroups IsVisibleForAllUsers AdditionalRelations IncludeCustomFields Output: Active IsSystemGenerated IsDistributionGroup IsVisibleForAllUsers CustomFields	AccessGroupService:GetCases
Introduce a macro support for date properties in the default value template for case and document. Support has been to two templates. Document Date Today Yesterday Tomorrow One week ago SIF.AdvanceCase SIF.AdvanceDocument	DocumentService:CreateDocument CaseService: CreateCase
Remove unnecessary logging for SynchronizeUser.	UserService: SynchronizeUser

Improvements to UpdateCase, introduce new flag "SyncArchiveCodes" to support add/delete classification codes connected to a case.	CaseService: UpdateCase
Improvements to SIFEvents, support for more than 5 bindings to SIF exchange in Rabbit MQ.	SupportService: ManageQueue
SupportService/CreateHistoricLog - Being able to import historic event logs from other sources, to preserve historic accuracy and improve eArchive as a flexible archive core for all markets. See SIF API documentation for more details.	SupportService: CreateHistoricLog
Improvements to remark validation while creating case.	CaseService: CreateCase
SIFEvents - Method obsolete: SupportService/SetupMQ. (Method has been removed from actual implementation. No need to explicitly register the SIFEvents. It will get loaded during application initialization.)	SupportService: SetupMQ
Bug fix: ActivityService/GetWorkFlowActivities not allowed with this endpoint. Please check endpoint filter configuration	AcitivityService: GetWorkFlowActivities

Build 6.4, February 2025

Changes included	Affects
Improvements: FileService/GetFilesWithMetadata, orphan files (files without any connection to documents) will not be returned. (These changes are behind the toggle).	FileService: GetFilesWithMetadata
CaseService/GetCases- Added support for getting Stages information connected to a case. Introduced new flag "IncludeStages". Refer SIF API documentation for more information about data models.	CaseService: GetCases
Bugfix: ActivityService/AddHandlingActivity- handlings are not visible under "agenda candidates"	ActivityService: AddHandlingActivity
EstateService/SynchronizeEstate- Added support to add a connection to an already created estate. The current estate object will be a parent to added connections. Refer SIF API documentation for more information about data models.	EstateService: SynchronizeEstate
CaseService/CreateCase, GetCases - Introduced three new properties in CaseContactParameter - "SubjectArea", "Notes" and "ActionClass". Same will return in GetCases's Contact object.	CaseService: GetCases

	CreateCase
UserService/GetUsers- Improvements to Profile object in result. Introduce new property "RoleDescription".	UserService: GetUsers
Bugfix: CaseService/GetCases - Timeout when using "ContactReferencenumber" filter	CaseService: GetCases
DocumentService/SignOffDocument - Added support for signing off document with specific contact. Refer SIF API documentation for more information.	DocumentService: SignOffDocument
Bugfix: DocumentService/GetDocuments - Missing File UID and UIDOrigin in Files object.	DocumentService: GetDocuments
Improvements: FileService/GetFilesWithMetadata and GetFileWithMetadata- Added new property in FileResult object - Size.	FileService: GetFilesWithMetadata GetFileWithMetadata
CaseService/GetCases- New property in CaseResult object - StatusRecno.	CaseService: GetCases

Build 6.3, October 2024

Changes included	Affects
Bug fix: GetCases with OnlyPublicInfo = true returned unofficial title for both titles.	CaseService: GetCases
UserService improvements - IsDefault property in UserProfile data model. You can explicitly the set default profile while synchronizing a user. Also get the same in GetUsers.	UserService: GetUsers SynchronizeUser
UID and UIDOrigin support in Case, Project, Estate, File, and Document service. It's a unique ID across all 360 solutions. Two new properties UID and UIDOrigin have been added to the response object of CREATE methods	CaseService: GetCases CreateCase DocumentService: GetDocuments CreateDocument ProjectService: GetProjects CreateProject EstateService: GetEstates

	SynchronizeEstate FileService: GetFilesWithMetadata GetFileWithMetadata CreateFile
Improvements to setting "SIF- Inherit responsible from case"- If option "Inherit both responsible unit and person." is selected. It will still work if anyone of the property from case is empty. (Earlier it needed both the values from case.)	DocumentService: CreateDocument
Improvements - Custom query-more complex queries with datatokens or subselect are also supported. This is behind the feature toggle - SIFCustomQueryImprovements	CaseService: GetCases DocumentService: GetDocuments ProjectService: GetProjects FileService: GetFilesWithMetadata ContactService: GetContactPersons GetPrivatePersons GetEnterprises

Build 6.2, release date May 2024

Changes included	Affects
Pilot release - Introduced support for subscribing to an event queue in 360. Three methods have been added to an existing SupportService. For more details, please read the SIF API documentation. - SetupMQ (Create the SIF exchange and add event handlers) - ManageQueue - WaitForEvents (Get all events already on queue and wait for next, until connection timeout)	SupportService: SetupMQ ManageQueue WaitForEvents
DocumentService/SignOffDocument- Improvement to response code. Added support for "Preliminary answer sent" response code.	DocumentService:

	SignOffDocument
CaseService/GetCases- Introduced a new flag property "IncludeUnregisteredDocument" in GetCasesQuery. GetCases API call with service user/endpoint user returns all the connected documents including "unregistered documents". With this new flag, one can limit to only registered documents.	CaseService: GetCases
Bugfix: SIF: GetMyCases returned cases for not configured contact roles in MyCases config	MyCasesService: GetMyCases
RevisionService/GetRevisions- Improvements to the existing method. Added more filters to GetRevisionsParameter object. Please check SIF API documentation for more details.	RevisionService: GetRevisions
SIF business logic changes. All the low-level queries are running within the access matrix.	AllServices
Bugfix- SIF- UpdateCase- Updating case category even if it is not sent in a request.	CaseService: UpdateDocument
SIF business logic changes- In an old SIF implementation, we stored the ExternalIds for all entities in another table in 360. We move those externalIds to a new table in Get methods. Now this insertion will happen with internal service user.	CaseService: GetCases DocumentService: GetDocuments EstateService: GetEstates ProjectService: GetProjects FileService: GetFilesWithMetadata.
CaseService/GetCases- Changes to "MyCasesConfig" property. This filter has two properties, CaseType and CaseContactRoles. Use this filter along with ContactReferenceNumber or ContactExternalId to get desired result. Please check SIF API documentation for more details.	CaseService: GetCases.
SupportService- Introduced new method "AddExternalId". This method can be used to add an external id for an entity. Please check SIF API documentation for more details.	SupportService: AddExternalId
Bugfix- FileService/GetFilesWithMetadata TotalPageCount value is not correct	FileService: GetFilesWithMetadata
Bugfix- DocumentService/GetDocuments- RecordType filter not working when recno is used in the format "recno:xxxxxx"	DocumentService: GetDocuments

SupportService/GetCodeTable- Introduced new flag property "IncludeAllLangauges". Default set to false. Set this true to return codes for all supported languages in 360.	SupportService: GetCodeTableRows
SupportService/GetCodeTable- Improvement to existing flag "IncludeExpiredValues".	SupportService: GetCodeTableRows

Build 6.0, release date January 2024

Changes included	Affects
ActivityService- Introduce a new service to fetch activities from 360. Currently, this service is limited to some activity types like workflow, progress plans, and board handling. For more information, please refer to the SIF API documentation.	ActivityService: CreateWorkflowActivity, UpdateWorkflowActivity, GetWorkFlowActivities, GetHandlingActivities, GetProgressPlanDetails, AddHandlingActivity, UpdateHandlingActivity
Bugfix: SIF- GetCases- not returning unregistered contact addresses.	CaseService: GetCases
With version 6.0, we have started merging the GetMyCases to GetCases. Introduce some new properties in GetCasesQuery and GetCasesResult/CaseResult to support GetMyCases. After some releases, we will deprecate MyCasesService.	CaseService: GetCases
Bugfix: SIF GetClassifications query doesn't return default paragraphs in Noark setup	SupportService: GetClassifications
Added support for FileService/GetFilesWithMetadata in endpoint configuration to restrict the result object	FileService: GetFilesWithMetadata
Bugifix- GetCases- CaseEstate result not returning correct estate recno.	CaseService: GetCases

Introduce new methods under SupportService- AddTempEntityStorageText and GetTempEntityStorageText. These methods will add or return a text property stored in temp storage of 360. For more details, please check out SIF API documentation	SupportService: AddTempEntityStorageText, GetTempEntityStorageText
Bugfix- SIF- GetCases- Customfields property not returning data if custom query returns more than 250 rows.	CaseService: GetCases

Build 5.18, release date 2024-09-24, hotfix 100

Changes included	Affects
Improvements - Custom query-more complex queries with datatokens or subselect are also supported. This is behind the feature toggle - SIFCustomQueryImprovements	CaseService: GetCases

Build 5.18, release date 2024-06-03, hotfix 67

Changes included	Affects
Bug fix: GetCases with OnlyPublicInfo = true returned unofficial title for both titles.	CaseService: GetCases
Bug fix: GetDocuments "RecordType" filter did not work as expected.	DocumentService: GetDocuments
CaseService/GetCases- Changes to "MyCasesConfig" property. This filter has two properties, CaseType and CaseContactRoles. Use this filter along with ContactReferenceNumber or ContactExternalId to get desired result. Please check SIF API documentation for more details.	CaseService: GetCases

Build 5.18, release date 2024-01-18

Changes included	Affects
ActivityService- Introduce a new service to fetch activities from 360. Currently, this service is limited to some activity types like workflow, progress plans, and board handling. For more information, please refer to the SIF API documentation.	ActivityService: CreateWorkflowActivity, UpdateWorkflowActivity, GetWorkFlowActivities, GetHandlingActivities,

	GetProgressPlanDetails, AddHandlingActivity, UpdateHandlingActivity
Bugfix: SIF- GetCases- not returning unregistered contact addresses.	CaseService: GetCases
With version 5.18, we have started merging the GetMyCases to GetCases. Introduce some new properties in GetCasesQuery and GetCasesResult/CaseResult to support GetMyCases. After some releases, we will deprecate MyCasesService.	CaseService: GetCases
CaseService/GetCases- Introduced a new flag property "IncludeUnregisteredDocument" in GetCasesQuery. GetCases API call with service user/endpoint user returns all the connected documents including "unregistered documents". With this new flag, one can limit to only registered documents.	CaseService: GetCases

Build 2.1.10, release date 2023-10-09, Hotfix.

Changes included	Affects
Improvements to GET methods to support SIF in multi-company solutions where case numbers and document numbers can be duplicated. Add this setting in the web.config "SI.Data.UseRecnoForLookup" to do look up on the basis of entity recno for connected relation.	CaseService: GetCases DocumentService: GetDocuments MyCasesService: GeMyCases RevisionService: GetRevision ProjectService: GetProjects
Bugfix: SIF- UpdateCase- Updating case category even if it is not sent in request.	CaseService: UpdateCase

Build 5.17, release date 2023-09-05, Hotfix 50

Changes included	Affects
------------------	---------

CaseService/GetCases- Milestone support. Introduce new flag "IncludeMilestones" to fetch the milestone related information along with other case details.	CaseService: GetCases
ActivityService- Introduce a new service to fetch activities from 360. Currently, this service is limited to some activity types like workflow, progress plans, and board handling. For more information, please refer to the SIF API documentation.	ActivityService: CreateWorkflowActivity, UpdateWorkflowActivity, GetWorkFlowActivities, GetHandlingActivities, GetProgressPlanDetails, AddHandlingActivity, UpdateHandlingActivity

Build 5.17, release date 2023, June

Changes included	Affects
Introduce a new method under FileService/UploadStream to support large file sizes. This method takes file stream as request content. For more information, please refer SIF API documentation.	FileService: UploadStream
Introduce a new method under SupportService/GetEntitiesExternalIds. This method returns external id information for configured external systems in the newly added SIF setting "SIF External Systems". For more information., please refer SIF API documentation	SupportService: GetEntitiesExternalIds
Improvement: Introduce a new setting and property in DocumentService/CreateDocument to control file creation. Set property "RunFilesInDocumentBatch" in CreateDocumentParameter to true if files should be run in the same transaction with a document. The same can be achieved by the newly added setting "SIF File Inserts In DocumentBatch". For more details, please refer to SIF API documentation.	DocumentService: CreateDocument
Improvements: Introduce a new setting to control the transaction scope creation. Using this setting you can disable transaction scope creation from SIF API and let the 360 business logic creates it. Default it is enabled.	AllServices
Introduce a new method to generate an Open API definition for SIF RPC services. Use the JSON API specification to generate the client. "GetSwaggerOpenAPIServiceDefinition"	SupportService: GetSwaggerOpenAPIServiceDefinition
Introduce new properties in GetDocumentsQuery- "SearchUnregisteredDocument" and "UnregisteredDocumentOrigin" to search unregistered documents. For more information, refer SIF API documentation.	DocumentService: GetDocuments

Pilot functionality in SIF in 5.17: Security and performance- To improve performance, security, and data privacy, configure the Get endpoints with only the necessary properties in the result set. In this way, you can restrict third parties to having limited data from P360. For a detail explanation, please refer to SIF API documentation.	CaseService: GetCases DocumentService: GetDocuments
Bugfix- CaseService/GetCases - ContactRecnos property only considering ToContact (enterprises or private persons) relation.	CaseService: GetCases
Improvement - FileService- GetFileWithMetadata support for unregistered documents when using bearer token authentication.	FileService: GetFileWithMetadata
SIF RPC support with restricted mode of P360. (It is behind the feature toggle- EnableRestrictedModeForSIF)	All services
Improvement: DocumentService/CreateDocument - dedicated log when document signed off while creating it.	DocumentService: CreateDocument
Bug fix: Not able to archive file with name ending in "pdf.pdf".	DocumentService: CreateDocument FileService: CreateFile

Build 5.16, release date 2023-08-03, Hotfix 84

Changes included	Affects
Bugfix: SIF-CreateDocument - Instant sign-off failing when only unregistered contacts have been sent.	DocumentService: CreateDocument

Build 5.16, release date 2023-05-03 Hotfix 45

Changes included	Affects
Bugfix: SIF-GetCodeTable. Some attribute value tables and custom code tables were not supported.	SupportService: GetCodeTableRows

Build 5.16, release date 2023-04-24 Hotfix 41

Changes included	Affects
Bugfix: SIF- GetCodeTableRows stopped supporting case insensitive in code table name	SupportService: GetCodeTableRows

Build 5.16, release date 2023, March

Changes included	Affects
Improvements: If the uploaded file reference's extension doesn't match with the specified file format in CreateDocument or CreateFile or UpdateFile or UpdateDocument, API will throw an exception.	FileService: CreateFile, UpdateFile DocumentService: CreateDocument, UpdateDocument
Improvement: Introduce new setting "SIF LastDate look-up in entitylog", default set to yes, "LastDate" property in GetCases and GetDocument if set then will do lookup in entitylog to get data on basis of last modified date. If setting set to "no", then it won't do lookup on EntityLog but only respective entity's "ModifiedDate". The setting is added to improve performance.	CaseService: GetCases DocumentService: GetDocuments
Improvement: Extra check added to validate the code table's name in SupportService/GetCodeTableRows	SupportService: GetCodeTableRows
Improvements: Custom XML query supports distinct clause. Example: If custom query contains DISTINCT attribute for main entity.	CaseService: GetCases DocumentService: GetDocuments ContactService: GetEnterprises GetContactPersons GetPrivatePerson FileService: GetFilesWithMetadata

	ProjectService: GetProjects
--	---

Build 5.15, release date 2022, December

Changes included	Affects
Introduced a new method UpdateUser in UserService to update user properties. Please refer SIF API documentation for more updates	UserService: UpdateUser
Added support to fetch keywords in GetCases and GetDocuments. Set the flag IncludeKeywords to true, default is false.	CaseService: GetCases DocumentService: GetDocuments
Added support to return remarks in GetCases. Set the flag IncludeRemarks to true, default is false.	CaseService: GetCases
Added support to return DocumentCategory information in GetCases->CaseDocumentResult.	CaseService: GetCases
Added support to return ImportedDocumentNumber in GetCases->CaseDocumentResult	CaseService: GetCases
Bugfix: Default value for Document.sähke2 "S2_ToSecurityReason" is failing all createDocument	DocumentService: CreateDocument
Removed SIF WS integration point from endpoint config.	Old SIF WCF services.
Bugfix: Document insertion successful even if XMLFragement insert fails on eArchive system	DocumentService: CreateDocument CaseService: CreateCase
Bugfix: UserService/SynchronizeUser- Improved audit trail feature toggle doesn't work if UserProfile object has role recno not in format "recno:XXXX"	UserService: SynchronizeUser

Build 2.1.10, release date 2022-09-28

Changes included	Affects
Bugfix: Added support of AdditionalFields in ContactService/UpdatePrivatePerson	ContactService: UpdatePrivatePerson

Build 5.14, release date 2022, October

Changes included	Affects
Added support for adding/updating code table row, -SupportService/AddCodeTableRow -SupportService/UpdateCodeTableRow For more details, please refer SIF API documentation	SupportService: AddCodeTableRow UpdateCodeTableRow
SOAP Bridge support deprecated.	All SOAP bridge Services
Introduced new filter property "SortCriterion" in GetUsers. String value, provide either: "RecnoDescending" or "RecnoAscending" to Sort the resultset by recno.	UserService: GetUsers
Introduced new filter property "SortCriterion" in GetFilesWithMetadata. String value, provide either: "RecnoDescending" or "RecnoAscending" to Sort the resultset by recno.	FileService: GetFilesWithMetadata
FileService/CreateFileVariant- Removed mandatory "VersionFormat" validation while creating variant of existing file.	FileService: CreateFileVariant
Bugfix: Added support of AdditionalFields in ContactService/UpdatePrivatePerson	ContactService: UpdatePrivatePerson
Under development- Newly added two methods under SupportService- BulkImportAsync and BulkImportSync are not ready for use, Please contact Tieto Public360 support for more information.	SupportService: BulkImportAsync, BulkImportSync
SIF Advance endpoint filter configuration for CaseService/UpdateCase and DocumentService/UpdateDocument. Introduced two new filters SIF.UpdateCaseFilter and SIF.UpdateDocumentFilter. To use these new filters, please refer SIF API documentation.	CaseService: UpdateCase, DocumentService:

Build 5.13, release date 2023-09-13, Hotfix 131

Changes included	Affects
ActivityService- Introduce a new service to fetch activities from 360. Currently, this service is limited to some activity types like workflow, progress plans, and board handling. For more information, please refer to the SIF API documentation.	ActivityService: CreateWorkflowActivity, UpdateWorkflowActivity, GetWorkFlowActivities, GetHandlingActivities, GetProgressPlanDetails, AddHandlingActivity, UpdateHandlingActivity

Build 5.13, release date 2022, June

Changes included	Affects
A new method has been introduced under FileService- "CreateFileVariant". This method will allow you to insert a new variant on an existing file.	FileService: CreateFileVariant
Introduced support for "UploadedFileReference" in FileService/UpdateFile	FileService: UpdateFile
Introduced new property "FileReferenceToken" in GetFileQuery to download temporary uploaded file. This property should be used together with CheckOutAndGetFileForExternalControl method.	FileService: GetFile
Introduced support for returning "FileReferenceToken" in response. You can either return a byte array or a reference token.	FileService: CheckOutAndGetFileForExternalControl
Bugfix: Custom fields returns null for empty object.	CaseService: GetCases DocumentService: GetDocuments

	ContactService: GetContactPersons, GetPrivatePersons, GetEnterprises
Bugfix: FileService not supporting recno in FileFormat property	FileService: CreateFile DocumentService: CreateDocument

Build 5.12.155, release data 2022-06-22 (Hotfix- 51)

Changes included	Affects
Bugfix: Unknown file format if format not mentioned while using FileService/Upload- error due to removing of ForceCorrectFileFormat method.	FileService: CreateFile DocumentService: CreateDocument
Bugfix: Custom Field comes null for given set of responses	CaseService: GetCases DocumentService: GetDocuments FileService: GetFilesWithMetadata ProjectService: GetProjects ContactService: GetContactPersons, GetPrivatePersons, GetEnterprises

Build 5.12.155, release date 2022-06-04 (Hotfix-24)

Changes included	Affects
Bugfix: FileService not supporting recno in FileFormat property	FileService: CreateFile DocumentService:

Build 5.12.155, release date 2022-04-29

Changes included	Affects
Introduced new property "IsUnofficial" under CaseContact and DocumentConatct result object.	DocumentService: GetDocuments CaseService: GetCases
SIF Advance endpoint filter configuration changes. We have added support for more advanced endpoint configuration for SIF APIs, to be able to provide limited rights, both on methods you invoke or data you retrieve from 360.	All RPC Services Available Filter sets template: CaseService/GetCases DocumentService/GetDocuments
Introduced new method under SupportService/GetClassifications. This new method will return classification code information. For more details, refer SIF API documentation.	SupportService: GetClassifications
Added CustomFields support in ProjectService/GetProjects result object. To return custom fields/Additional fields use the setting "SIF Project Custom Fields Query" to set a custom XML query. And also flag property in GetProjectQuery-"IncludeCustomFields"	ProjectService: GetProjects
Performance improvements- we have optimized the execution of custom query if "IncludeCustomFields" set to true.	CaseService: GetCases DocumentService: GetDocuments FileService: GetFilesWithMetadata ProjectService: GetProjects ContactService: GetContactPersons, GetPrivatePersons, GetEnterprises
Bugfix: Unregistered contact not supported as sender while signing off the document. (Sign off document at the time creation through SIF.)	DocumentService: CreateDocument

SIF: CheckOutAndGetFileForExternalControlAsync Fails in SIF SOAP bridge	FileService: CheckOutAndGetFileForExternalControl
SIF: Error in SIF Soap bridge when getting Cases when using 'IS NOT NULL' in AdditionalFields	CaseService: GetCases DocumentService: GetDocuments ContactService: GetContactpersons, GetEnterprises, GetPrivatepersons FileService: GetFilesWithMetaData ProjectService: GetProjects
SIF: FileService.GetFile via SIF SOAP bridge gives error	FileService: GetFile
Bugfix: FileService/GetFile- returns error if MIME type missing for file extension in code table: File format.	FileService: GetFile
Introduced new property "AdditionalRelations" in GetCasesQuery and GetDocumentsQuery. This field is used to set up a "GET" query to fetch the data with custom or standard relations which are not provided in the standard request parameter for Cases and Documents only.	DocumentService: GetDocuments CaseService: GetCases
Bugfix: DocumentService/GetDocuments, added missing sorting order while executing main search query.	DocumentService: GetDocuments
Bugfix: Incorrect swagger JSON specification for FileService/GetFile- HttpResponseMessage object.	FileService: GetFile
eArchive- Introduced new property called "ImportedCaseNumber" in CaseService. "ImportedDocumentNumber" in DocumentService.	DocumentService: CreateDocument, GetDocuments, UpdateDocument CaseService: CreateCase, GetCases, UpdateCase.
Added support to only update file properties without updating file content.	FileService: UpdateFile
Low level changes to CreateFile implementation regarding file format. Impact: When any customer uses /v2/support/uploadfile endpoint to upload a large file and then uses SIF API FileService/CreateFile. If in the upload file request, the filename is without the extension then it will be archived to 360 with an unknown format through the CreateFile service. Solution:	FileService: CreateFile DocumentService: CreateDocument

The "filename" parameter in the upload file should be with an extension. For more details, please refer SIF API documentation	
Bugfix: SIF.document.sähke2 default value template missing three mandatory Sähke2 fields: Action(FI: Toimenpide) Record Type(FI: Asiakirjatyyppi) Security reason (FI: Salassapitoperuste)	DocumentService: CreateDocument
Bugfix: MyCases service, config does not work with multiple case types	MyCasesService: GetMyCases

Build 5.11.202, release date 2022-06-23 (Hotfix-257)

Changes included	Affects
Bugfix: Custom Field comes null for given set of responses	CaseService: GetCases DocumentService: GetDocuments FileService: GetFilesWithMetadata ProjectService: GetProjects ContactService: GetContactPersons, GetPrivatePersons, GetEnterprises

Build 5.11.202, release date 2022-06-10 (Hotfix- 221)

Changes included	Affects
------------------	---------

Bugfix: FileService not supporting recno in FileFormat property	FileService: CreateFile DocumentService: CreateDocument
SIF RPC- Swagger json client generation - HttpResponseMessage class not generated correctly for GetFile.	FileService: GetFile
Introduced CustomFields support in ProjectService/GetProjects. Set flag "IncludeCustomFields" to fetch additional fields in the GetProjects response. A new setting has been introduced "SIF Project Custom Field Query" under web admin -> Configuration ->Settings	ProjectService: GetProjects
Bugfix: Custom fields returns null for empty object.	CaseService: GetCases DocumentService: GetDocuments ContactService: GetContactPersons, GetPrivatePersons, GetEnterprises
Added support to only update file properties without updating file content.	FileService: UpdateFile

Build 5.11.202, release date 2022-05-02 (Hotfix- 195)

Changes included	Affects
Bugfix: MyCases service, config does not work with multiple case types	MyCasesService: GetMyCases

Build 5.11.202, release date 18-04-2022 (Hotfix-168)

Changes included	Affects
SIF Advance endpoint filter configuration changes. We have added support for more advanced endpoint configuration for SIF APIs, to be able to provide limited rights, both on methods you invoke or data you retrieve from 360.	AllServices Available Filter sets template: CaseService/GetCases DocumentService/GetDocuments

Build 5.11.202, release date 2022-03-01 (Hotfix package

80)

Changes included	Affects
SIF: CheckOutAndGetFileForExternalControlAsync Fails in SIF SOAP bridge	FileService: CheckOutAndGetFileForExternalControl
SIF: Error in SIF Soap bridge when getting Cases when using 'IS NOT NULL' in AdditionalFields	CaseService: GetCases DocumentService: GetDocuments ContactService: GetContactpersons, GetEnterprises, GetPrivatepersons FileService: GetFilesWithMetaData ProjectService: GetProjects
SIF: FileService.GetFile via SIF SOAP bridge gives error	FileService: GetFile

Build 5.11, release date 2022-01-07

Changes included	Affects
Introduced new method under SupportService/GenerateJsonClient, using this, you can download the JSON specification of service and generate client of any language.	SupportService: GenerateJsonClient
Removed version dependent implementation from SIF core component, as SIF is now part of standard so it will support standard BL version only.	All Services
Introduced new property "eArchiveXMLFragment" in CaseService and DocumentService, to support virtual data in eArchive installation through XML fragment.	CaseService: CreateCase, UpdateCase, GetCases DocumentService: CreateDocument, UpdateDocument, GetDocuments
Added two new SIF default value templates with Sahke2 meta fields under Finnish sub setup.	CaseService: CreateCase DocumentService: CreateDocument
Bugfix: SIF: In the Finnish sub setup, incorrect RecordType code recho is set when the document is created via SIF	DocumentService: CreateDocument

Build 5.10.164, release date 2022-06-09 (Hotfix- 119)

Changes included	Affects
Added support to only update file properties without updating file content.	FileService: UpdateFile

Bugfix: FileService not supporting recno in FileFormat property	FileService: CreateFile
Bugfix: SIF RPC- Swagger json client generation - HttpResponseMessage class not generated correctly for GetFile.	FileService: GetFile

Build 5.10.164, release date 2022-05-04 (Hotfix package 109)

Changes included	Affects
Bugfix: MyCases service, config does not work with multiple case types	FileService: CheckOutAndGetFileForExternalControl
Bugfix: FileService not supporting recno in FileFormat property	FileService: CreateFile DocumentService: CreateDocument

Build 5.10.164, release date 2022-03-03 (Hotfix package 91)

Changes included	Affects
SIF: CheckOutAndGetFileForExternalControlAsync Fails in SIF SOAP bridge	FileService: CheckOutAndGetFileForExternalControl
SIF: Error in SIF Soap bridge when getting Cases when using 'IS NOT NULL' in AdditionalFields	CaseService: GetCases DocumentService: GetDocuments ContactService: GetContactpersons, GetEnterprises, GetPrivatepersons FileService: GetFilesWithMetaData ProjectService: GetProjects
SIF: FileService.GetFile via SIF SOAP bridge gives error	FileService: GetFile

Build 5.10.164, release date 2022-01-20 (Hotfix package 68)

Changes included	Affects
SIF: In the Finnish subsetup, incorrect RecordType code recno is set when the document is created via SIF.	DocumentService: CreateDocument

Build 5.10.164, release date 2022-01-19 (Hotfix package

67)

Changes included	Affects
Introduced new method under SupportService/GenerateJsonClient to support getting swagger documentation for SIF RPC API. For more information, refer SIF API documentation.	SupportService: GenerateJsonClient

Build 5.10.164, release date 2021-10-12

Changes included	Affects
Introduced new property Language in SynchronizeUserParameter and GetUsersResult. With the help of this property, you can set user language. Default set to NOR.	UserService: GetUsers, SynchronizeUser
Removed the support of creating files with unknown file formats, this validation depends on the FileFormatControl flag defined in each document archive.	FileService: CreateFile
Introduced new flag in UpdateCaseParameter "SyncCaseEstates". If provided it will add or delete estates to case. Default is set to false.	CaseService: UpdateCase
Added support for ISO 3166-1 alpha-2 country codes	ContactService
Introduced new setting - "SIF Inherit Responsible From Case" under web admin settings. This setting will only be read if the responsible organization unit and responsible person are not mentioned in the CreateDocument request. Default set to "Do not inherit".	DocumentService: CreateDocument

Build 5.9.927, release date 2022-05-02 (Hotfix package 153)

Changes included	Affects
Bugfix: MyCases service, config does not work with multiple case types	MyCasesService: GetMyCases

Build 5.9.927, release date 2022-03-02 (Hotfix package

Changes included	Affects
SIF: CheckOutAndGetFileForExternalControlAsync Fails in SIF SOAP bridge	FileService: CheckOutAndGetFileForExternalControl
SIF: Error in SIF Soap bridge when getting Cases when using 'IS NOT NULL' in AdditionalFields	CaseService: GetCases DocumentService: GetDocuments ContactService: GetContactpersons, GetEnterprises, GetPrivatepersons FileService: GetFilesWithMetaData ProjectService: GetProjects
SIF: FileService.GetFile via SIF SOAP bridge gives error	FileService: GetFile

Build 5.9.927, release date 2021-12-10 (Hotfix package 100)

Changes included	Affects
Added support for providing user language while syncing in 360. Also return in GetUsers response object.	UserService: SynchronizeUser, GetUsers

Build 5.9.927, release date 2021-07-08 (Hotfix package 29)

Changes included	Affects
Added support for OperatorType in AdditionalFieldParameter, for more information refer SIF API documentation	CaseService: GetCases DocumentService: GetDocuments ContactService: GetContactpersons, GetEnterprises, GetPrivatepersons FileService: GetFilesWithMetaData ProjectService: GetProjects

Build 5.9.927, release date 2021-08-06 (Hotfix)

Changes included	Affects
------------------	---------

Introduced new setting - "SIF Inherit Responsible From Case" under web admin settings. This setting will only be read if the responsible organization unit and responsible person are not mentioned in the CreateDocument request. Default set to "Do not inherit".

DocumentService:
CreateDocument

Build 5.9.927, release date June 2021

Changes included	Affects
SIF APIs (RPC and SOAP bridge) merged to standard 360 setup.	All services
SIF SOAP deprecated. It will no longer utilize Windows Communication Foundation (WCF). The APIs will still be available, only the URL will be different, i.e. through soap bridge As SOAP bridge is a very light weight and simple wrapper created to support old WCF services. There might be chances that it won't work as expected especially Stream operations like CreateFile, CheckIn, CheckOut, Upload, GetFile. It is highly recommended to use SIF RPC for these operations.	SIF SOAP services
SIF RPC endpoint changes in Authproxy config not supported anymore. If customer/custom integration using authkey from config file, needs to move to 360 web admin -> configuration -> endpoint configuration	SIF RPC services
Introduced new property ExternalId (Id, Type) for files in FileService (CreateFile, UpdateFile) and DocumentService (CreateDocument and UpdateDocument)	FileService: CreateFile, UpdateFile DocumentService: CreateDocument, UpdateDocument
Introduced support for sign off/writeoff the incoming document at time of creation. (properties in DocumentService/CreateDocument - ResponseCode, SignOffWithResponseCode)	DocumentService: CreateDocument.
URL property in result object of GetCases and GetDocuments return relative url of 360/eArchive.	CaseService: GetCases DocumentService: GetDocuments
Bugfix: TotalPageCount and TotalRowCount not working for last page- FileService/GetFilesWithMetadata	FileService: GetFilesWithMetadata

Build 2.1.9, release date 2022-02-24

Changes included	Affects
Performance- DocumentService/GetDocuments, added support for query hints. To enable this use the new setting "SIF Get Documents Query Hint"	DocumentService: GetDocuments
Bugfix: DocumentService/GetDocuments, added missing sorting order while executing main search query.	DocumentService: GetDocuments

Build 2.1.8, release date 2022-02-16

Changes included	Affects
Introduced new method under SupportService/GetClassifications. This new method will return classification code information. For more details, refer SIF API documentation.	SupportService: GetClassifications

Build 2.1.6, release date 2022-02-07

Changes included	Affects
Introduced new property "IsUnofficial" under CaseContact and DocumentConatct result object.	DocumentService: GetDocuments CaseService: GetCases
Introduced new property "AdditionalRelations" in GetCasesQuery and GetDocumentsQuery. This field is used to set up a "GET" query to fetch the data with custom or standard relations which are not provided in standard request parameter for Cases and Documents only.	DocumentService: GetDocuments CaseService: GetCases

Build 2.1.5, release date 2021-12-21

Changes included	Affects
#135012 - Bug fix- RecordType code value sets incorrect recho for RecordType when document is created via SIF	DocumentService: CreateDocument

Build 2.1.4, release date 2021-11-17

Changes included	Affects
Introduced new property Language in SynchronizeUserParameter and GetUsersResult. With the help of this property, you can set user language. Default set to NOR.	UserService: GetUsers, SynchronizeUser

Build 2.1.3, release date 2021-08-31 (Hotfix)

Changes included	Affects
------------------	---------

Bugfix: 2.1.2 version of SIF missing fix for AdditionalFields ProjectService/GetProjects. This build includes a fix for Project/GetProjects. (Especially SOAP services.)

ProjectService:
GetProjects

Build 2.1.2, release date 2021-08-23 (Hotfix)

Note: This hotfix is only for On-prem customers especially SOAP services.

Changes included	Affects
Bugfix: 2.1.1 version of SIF breaks backward compatibility for clients that use AdditionalFields where "OperatorType" is null. (OperatorType was added in version 2.1.1).	CaseService: GetCases DocumentService: GetDocuments ContactService: GetContactPersons, GetPrivatePersons, GetEnterprises FileService: GetFilesWithMetadata ProjectService: GetProjects

Build 2.1.1, release date 2021-06-30 (Hotfix)

Note: All these bug fixes are also available in 5.9 Hotfix.

Changes included	Affects
Introduced new property in AdditionalField - "OperatorType", which makes it possible to search with additional field with different operator like 'equal', 'isnull' and many more.	CaseService: GetCases DocumentService: GetDocuments ContactService: GetContactPersons, GetPrivatePersons, GetEnterprises FileService: GetFilesWithMetadata ProjectService: GetProjects
Bugfix: FileService/CreateFile , DocumentService/CreateDocument- Fetching inactive file formats	FileService: CreateFile DocumentService: CreateDocument
Bugfix: FileService/GetFileWithMetaData, GetFilesWithMetaData not return file version property.	FileService: GetFilesWithMetaData, GetFileWithMetaData
Bugfix: SupportService/GetEvents not return access code update event for document and files.	SupportService: GetEvents
Bugfix: SupportService/GetEvents not return delete file event.	SupportService: GetEvents
Bugfix: FileService/GetFilesWithMetaData- incorrect "TotalRowsCount" on last page.	FileService: GetFilesWithMetaData

Build 2.1.0, release date 2021-03-26

Changes included	Affects
Fix: Load plugins issue while calling SIF through process engine.	All services
Introduced new property called "AccessGroupRecno" in GetProjects, GetContactPersons, GetEnterprises and GetPrivatePersons	ContactService: GetContactPersons, GetEnterprises, GetPrivatePersons

Build 2.0.0, release date 2021-03-06

Changes included	Affects
Major improvements in performance (Refactored Plugins related code)	All services
Introduced new setting "SIF Log Frequency" to control the logs generated from SIF API.	All services

Build 1.9.0, release date 2021-02-17

Changes included	Affects
Performance: Modified data structure related logic inside SIF to improve performance.	All services
Bugfix: Contact reference lookup issue while creating documents and cases. (error message: Object reference not set to an instance)	CaseService: CreateCase, UpdateCase DocumentService: CreateDocument, UpdateDocument
Bugfix: GetContactPersons, if enterprise has null a value. (error message: Input string was not in a correct format)	ContactService: GetContactPersons

Build 1.8.0, release date 2021-01-29

Changes included	Affects
Introduced support for Multi-value meta fields in Case and Document service using the AdditionalListFields parameter.	CaseService: CreateCase, UpdateCase DocumentService: CreateDocument, UpdateDocument
Introduced new property PrivateTelephone and DirectFax teleobjects in SynchronizeConatctPerson, UpdateContactPerson	ContactService: SynchronizeContactPerson, UpdateContactPerson

Build 1.7.0, release date 2020-12-30

Changes included	Affects
Introduced two new properties EnterpriseRecno and EnterpriseNumber in GetUsersResult/Users/Profiles.	UserService: GetUsers
Introduced new property Web teleobject in SynchronizeConatctPerson, GetContactPersons, UpdateContactPerson	ContactService: GetContactPersons, SynchronizeContactPerson, UpdateContactPerson
Introduced new flag RemoveResponsiblePerson in CaseService/UpdateCase and DocumentService/UpdateDocument	DocumentService: UpdateDocument CaseService: CaseDocument
Bugfix: UpdateProject deleting the project category if not mentioned in update request.	ProjectService: UpdateProject
Bugfix: Inactive contact with duplicate referencenumber set as responsibleperson.	All services- SIF WS, SIF REST, SIF RPC

Bugfix: Need admin rights to use existing keywords in CaseService and DocumentService. And sort property gets updated while using existing keywords.	CaseService: CreateCase, UpdateCase DocumentService: CreateDocument, UpdateDocument
Update the SupportService/CreateLog log message (Generated from)	SupportService: CreateLog
Introduced new property AccessGroupRecno in CaseService/GetCases, DocumentService/GetDocuments and FileService/GetFilesWithMetaData, GetFileWithMetaData.	CaseService: GetCases DocumentService: GetDocuments FileService: GetFileWithMetaData, GetFilesWithMetaData

Build 1.6.0, release date 2020-11-25

Changes included	Affects
Introduced new property AccessGroupRecno in GetUsersResult/User. Also added Pagination {MaxRows and Page property} in GetUsersParameter	UserService: GetUsers
Bugfix: Blank value update in the document if fields are not used for the update. Issue fixed for SendersReference, FiledOnPaper and RecordType	DocumentService: UpdateDocument
Introduced new property "SendersReference " in DocumentResult.	DocumentService: GetDocuments
Bugfix 5.7 or above: URL property in GetCases(), GetDocuments(), GetFileWithMetaData() and GetFilesWithMetaData()	CaseService: GetCases, DocumentService: GetDocuments FileService: GetFileWithMetaData, GetFilesWithMetaData

Build 1.5.0, release date 2020-10-09

Changes included	Affects
Introduced new flag "IncludeDocumentContacts" in GetDocumentsQuery parameter. The default set to true. Also returning contact type in DocumentContactResult.	DocumentService: GetDocuments
Bugfix: Correct AccessGroups list in GetUsersResult.	UserService: GetUsers
Bugfix: Return correct ExternalId object while GetCases, GetDocuments, GetProjects.	DocumentService: GetDocuments,

	CaseService: GetCases ProjectService: GetProjects
Bugfix: EnterpriseEntity result object only visible in ContactPersonResult.	ContactService: GetContactPersons
NuGet packages fix: Removed problematic developmentDependency attribute from the packages. Note that due to project version differences across the SIF solution, the dependencies don't currently work. This means you need to install all SIF NuGet packages separately. This will be fixed once we have converted all projects to .net core/.net fw 4.8. Please note that when referencing SIF NuGet packages, the PackageReference method is the preferred way.	SI.Data.* NuGet packages

Build 1.4.0, release date 2020-09-17

Changes included	Affects
Introduced the support for Audit trail functionality where you can create a log for the entity. This method is available in SupportService/CreateLog for both SIF WS and SIF RPC.	SupportService: CreateLog
Bugfix: Now special/reserved XML characters are supported in Externalid/Title/Code fields.	All services: SIF WS, SIF REST and SIF RPC
Bugfix: Now it is possible to sign off the outbound documents with incoming documents.	DocumentService: SignOffDocument
Introduced new result object for Enterprise information in GetContactPersonResult which includes Enterprise recno, externalid and referencenumber.	ContactService: GetContactPersons

Build 1.3.1, release date 2020-08-27 (Hotfix)

Change included	Affect
BugFix: Corrected the version of SI.Data.Contracts.dll	SI.Data.Contracts.dll

Build 1.3.0, release date 2020-08-21

Changes included	Affects
SIF libraries are upgraded to 4.8 .Net framework. SI.Data.Contracts upgraded to .Net standard 2.0	All SIF libraries.
Bugfix: Now "IsEndOfLog" property in result object returning correct value even if there is a huge gap in recno series for EntityLog.	SupportService: GetEvents
Bugfix: Now GetCasesResult will return null for unregistered contact recno.	CaseService: GetCases

Bugfix: Now special characters are supported like '&' in ArchiveCodes property.	DocumentService: CreateDocument, UpdateDocument. CaseService: CreateCase, UpdateCase.
Modified the logic for ExternalId while creating Case, Document and Project. As SI.Biz.ExternalObjectConnector assembly is obsolete now. Instead of referring to below entities: ExternalObject code table: External type connection : Entity - External, now pointing to this entity: External Integration keys.	DocumentService: CreateDocument, GetDocuments, UpdateDocument CaseService: CreateCase, GetCases, UpdateCase ProjectService: CreateProject, GetProjects, UpdateProject

Build 1.2.0, release date 2020-07-02

Changes included	Affects
Bugfix: It is now possible to connect/add contacts to cases, documents and projects (when creating and updating) using whichever ID field you like, independent of the contact's domain. ReferenceNumber and ExternalId are free to use across enterprises, private persons and contact persons. The only exception is that contact persons aren't registered with ReferenceNumber, but you're still able to connect contact persons passing recno in ReferenceNumber. This is implemented to hide unnecessary complexity, making our customers and third-party integrators not needing to consider which ID field to use. It may also improve performance, in that you might need to do fewer SIF calls to e.g., first retrieve Recno, ReferenceNumber or ExternalId using the contact service before actually adding the contact(s) to the case/document/project.	CaseService: CreateCase, UpdateCase DocumentService: CreateDocument, UpdateDocument ProjectService: CreateProject, UpdateProject
Bugfix: Now ExternalId is returned on connected contacts properly, independent of the contact's domain (enterprise, private person and contact person). Added ExternalId as output parameter on Contact result (GetProjects and GetCases).	CaseService: GetCases DocumentService: GetDocuments ProjectService: GetProjects
Bugfix: The input parameter ContactExternalID did not always work, but is now working as intended.	DocumentService: GetDocuments

Build 1.1.0, release date 2020-06-04

FYI: SIF has been switched to semantic versioning.

Changes included	Affects
Introduced support for adding ExternalID when creating documents. It's possible to filter documents based on ExternalID when retrieving and updating documents.	DocumentService: CreateDocument, GetDocuments, UpdateDocument
Bugfix: Added new dependent assembly binding in SIF WS and SIF REST web.config to avoid "Can not initiate ADContextUser because the context user is empty or invalid" error on 5.6 or later version of 360.	All services: SOAP and REST
Bugfix: Contiki Archive operation (when cleaning company number).	ContikiService: All operations
Bugfix: SynchronizeUser - Sets uup_default to NULL - Users appear as duplicate contacts in workflow.	UserService: SynchronizeUser

Build 1.0.18.3, release date 2020-04-23

Changes included	Affects
Added support for integrating with eArchive by using the SIF RPC interface.	Multiple services (see <i>eArchive support</i> chapter in SIF documentation for details)
Introduced support for adding contacts when creating/updating projects (also possible to synchronize contacts when updating project). In addition, it's possible to filter projects based on project contact (Recno and External ID) when retrieving projects. Multiple new, optional parameters.	ProjectService: All operations
Added support for defining explicit permissions (contacts or access groups) when creating/updating cases and documents.	CaseService: CreateCase, UpdateCase DocumentService: CreateDocument, UpdateDocument
Important: Added new SIF web admin setting, "SIF Enable ADContextUser" which is by default disabled. This might potentially break multiple services/operations <i>if</i> ADContextUser parameter is used. However, it's possible to enable the use of ADContextUser by editing this setting.	Web admin UI change, but multiple services potentially affected

Build 1.0.16.7, release date 2020-03-27

Changes included	Affects
------------------	---------

Removed some unnecessary "plugins" related logging.	All services
Bugfix: Modifying priority order of ID fields (Recno --> EnterpriseNumber --> ExternalID) for enterprises, due to error when trying to update ExternalID - now reflecting logic of the other update methods.	ContactService: UpdateEnterprise
Minor improvements to the SIF web admin settings.	Web admin UI change, no services affected directly
Enabled the SIF web admin settings to be used on eArchive environments as well.	Web admin UI change, no services affected directly

Build 1.0.15.4, release date 2020-01-22

Changes included	Affects
Bugfix: Introduced a "version check" in the install of "SIF default values". The default value changes are only installed for 360 version 5.5 and later (since they are only relevant from version 5.5). Prior to this version check, some special scenarios on 360 version 5.4 and earlier could potentially lead to duplicate default values being inserted.	Web admin UI change, no services affected directly

Build 1.0.15.3, release date 2020-01-17

Changes included	Affects
Made "SIF default values" available to be used from version 5.5 in 360 Admin (web admin), since this is now configurable directly in 360.	Web admin UI change, no services affected directly
Minor bugfixes and improvements related to GetEvents operation, and introduced a new property in GetEvent result, HighestProcessedRecno.	SupportService: GetEvents

Build 1.0.13.12, release date 2019-10-16

FYI: The version number format is now changed to include sprint number as well. Example: 1.0.X.Y, where **X** contains the sprint number, and **Y** the build number.

Changes included	Affects
Introduced new parameter, ReplyDocument, in the SignOffDocument operation so that it's possible to sign off a document with another document, and not only with a response code. The SignOff operation is now also available from the SIF REST (on-prem) interface.	DocumentService: SignOffDocument
Bugfix: GetDocuments method now returns files in the correct order, e.g., the same order as is shown in 360°, based on the Order (Seqno) field.	DocumentService: GetDocuments
Bugfix: The field, IsServiceUser, is now also returned in the result object.	UserService: GetUsers
Bugfix: Minor changes to the GetEvents operation to optimize the logic. Input parameter Count is renamed to LogCount. New output parameters are also added: IsEndOfLog, InfotypeCode and InfotypeRecno.	SupportService: GetEvents

Build 1.0.1.116, release date 2019-09-19

Changes included	Affects
Bugfix: GetDocuments method returned wrong number of results when MaxReturnedDocuments was used	DocumentService: GetDocuments

Build 1.0.1.115, release date 2019-09-05

Changes included	Affects
New main functionality implemented: methods to get log info on 360 objects implemented in SupportService: GetEvents and GetLogs.	SupportService
Performance enhancements for GetCases, GetMyCases and Get Documents.	CaseService: GetCases MyCasesService: GetMyCases DocumentService: GetDocuments
To comply with 360 5.4 we remove log4net dependency and change the SIF mechanism for writing to trace and windows event viewer. When we write to windows event viewer, we now always write to SI.BIZ.System, with description prefixed by "SIF:".	All services
Added additional fields and custom field support on the create, update and get FileService Methods.	FileService: All methods
Bugfix: DocumentResult.ArchiveCodes.Count() now returns 0 instead of 1 if the document doesn't contain any archive codes.	DocumentService: GetDocuments
Show stack trace setting with YES/NO drop down instead of 0/-1 in web admin.	Web admin UI change, no services affected directly
Bugfix: Minor correction on the format of the new output field, URL.	CaseService: GetCases
New field in DocumentResult: AccessGroup.	DocumentService: GetDocuments

Build 1.0.1.97, release date 2019-08-07

Changes included	Affects
------------------	---------

Bugfix: Recno of Access Code was not returned in the GetDocuments response.	DocumentService: GetDocuments
Bugfix: When using ResponsiblePersonEmail on UpdateCase, internal and external contacts were considered. Now SIF only searches for internal contacts.	CaseService: UpdateCase
Bugfix: GetDocuments result contained an empty contact object in Contacts parameter when document had no contacts connected.	DocumentService: GetDocuments
Bugfix: ContactRecno in GetDocuments result referred to wrong contact recno when it was a contact person.	DocumentService: GetDocuments
New field in CaseResult: URL.	CaseService: GetCases
Bugfix: An error message “ <i>Unable to get property _blctxprofileid</i> ” could occur in some rare scenarios. Only relevant for 360° version 5.1.	CaseService: CreateCase, UpdateCase DocumentService: CreateDocument, UpdateDocument
Modified validation for handling of Remarks. Now Remark type is mandatory, along with either Remark title or Remark content.	CaseService: CreateCase, UpdateCase DocumentService: CreateDocument, UpdateDocument
Bugfix: In SIF RPC, the language of the integration user (which is used to define Code values) was overridden by default value “NOR” in the “SIF BL Lan Code” setting in 360° admin.	All operations

Build 1.0.1.85, release date 2019-06-27

Changes included	Affects
Bugfix: If getting documents from a case before one of the documents was <i>moved</i> , and the existing ones <i>renumbered</i> , and trying to get the documents again, then the files of some documents couldn't be retrieved (even though the document actually contained some files).	DocumentService: GetDocuments
Improved performance of retrieving documents, by adding more robust and smarter handling of document revisions.	DocumentService: GetDocuments
Bugfix: Default user profile was sometimes wrongfully set to a deactivated/expired profile.	UserService: SynchronizeUser

Build 1.0.1.79, release date 2019-06-11

Changes included	Affects
Added new fields for including subject specific meta data in the cases returned (to support scenarios in eByggesak 360°).	CaseService: GetCases

	MyCasesService: GetMyCases
Added new setting to specify if should sync users based on Contact Recno or Contact External ID. Makes it possible to update users login ID (username).	UserService: SynchronizeUser
Added new field IncludeProgressPlan to be able to not return information about progress plan on cases, and improve performance. Default value is true.	CaseService: GetCases
Added Code (name of access group) as a new input parameter for more search options to retrieve access groups. Another parameter, IncludeMembers, is also added to improve performance. Default value is true.	AccessGroupService: GetAccessGroups
Improved the handling of retrieving code table rows, to support scenarios where some code tables are lacking some columns (Recno, Code, Description).	SupportService: GetCodeTableRows
Improved performance of retrieving cases, by adding more robust and smarter handling of TotalPageCount output parameter.	CaseService: GetCases

Build 1.0.1.69, release date 2019-05-09

Changes included	Affects
Bugfix: some changes in 360 version 5.1 made some file methods fail	DocumentService: Create/UpdateDocument (create file from template) FileService: UpdateFile, CheckOutAndGetFile, UploadAndCheckInFile
Added TotalCount and TotalPageCount to more operations	EstateService: GetEstates ProjectService: GetProjects MyCasesService
Made it possible to turn stacktrace in error messages on or off, and having it default off	All operations
New setting for having a global claims prefix that is used in user synchronizations	UserService: SynchronizeUser
Bugfix: CheckOutAndGetFile/UploadAndCheckInFile did not work in RPC (added <i>byte array</i> parameter)	SIF RPC: FileService: CheckOutAndGetFile, UploadAndCheckInFile
Bugfix: remarks were not added when updating document	DocumentService: UpdateDocument

Build 1.0.1.58, release date 2019-04-12

*** This build contains the bugfix for the IncludeDocuments and IncludeFiles bug introduced in build 1.0.1.47. The operations affected are the GetCases and GetDocuments operations (in SOAP only). ***

Changes included	Affects
Bugfix: Now the IncludeDocuments and IncludeFiles flags works as expected. Default is true, to be backwards compatible.	CaseService: GetCases DocumentService: GetDocuments

Build 1.0.1.57, release date 2019-03-27

Changes included	Affects
Bugfix: it was not possible to update existing users without having the field IsServiceUser defined in the request.	UserService: SynchronizeUser

Build: 1.0.1.56, release date: 2019-03-25

Changes included	Affects
Added TotalCount in responses from paginated operations, which shows the total number of hits/rows in the result.	CaseService: GetCases DocumentService: GetDocuments ContactService: all get-operations FileService: GetFilesWithMetadata
Bugfix: TotalPageCount didn't show correct count on last page, and didn't show correct count when passing MaxReturnedCases in GetCases.	CaseService: GetCases DocumentService: GetDocuments ContactService: all get-operations
Better error message when Title and Initial fields have too many characters	ContactService: all sync- and update-operations
Support for updating Title on PrivatePerson	ContactService: UpdatePrivatePerson
Bugfix: when using email to set responsible person on case, now only internal contacts are considered.	CaseService: CreateCase
List<ArchiveCodes> in GetCases is available for REST as well	SIF REST: CaseService: GetCases

Build: 1.0.1.47, release date: 2019-03-05

This build contains a breaking change for the SOAP GetCases and GetDocuments operations, introduced with the IncludeDocuments and IncludeFiles flags. Do not use.

Changes included	Affects
New field in User-operations: ContactRecno	UserService: all operations
Bugfix: UpdateEnterprise no longer overwrite initials with null	ContactService: UpdateEnterprise
New field in UpdateFileParameter: Format	FileService: UpdateFile
New field "ProgressplanId" on CreateCase and GetCases, and new object with Progressplan-info in GetCases-response	CaseService: CreateCase, GetCases
New flags on GetDocuments and GetCases, IncludeDocuments and IncludeFiles, that makes it possible to get them without loading all the file- or documentdata.	CaseService: GetCases DocumentService: GetDocuments
New field on GetCases: List<ArchiveCodes>, making it possible to get a list of cases with any of the given archive codes.	CaseService: GetCases
New flags when updating cases and documents, SyncCaseContacts and SyncDocumentContacts, making it possible to edit and/or delete contacts.	CaseService: UpdateCase DocumentService: UpdateDocument
Support for adding Contact-relations when syncing PrivatePersons.	ContactService: SynchronizePrivatePersons

Build: 1.0.1.32, release date: 2019-02-13

Changes included	Affects
New input: AdditionalListFields, makes it possible to search for entities with a variable matching one of the values in the list.	CaseService: GetCases DocumentService: GetDocuments ContactService: all get-operations
Possibility to configure max number of files returned on documents in GetDocuments and GetCases, and max number of documents returned in GetCases.	CaseService: GetCases DocumentService: GetDocuments
RPC: Support for updating ContactPerson and Enterprise	SIF RPC: ContactService: UpdateContactPerson, UpdateEnterprise
Bugfix: issue with authentication when checking in and out files in 5.0 using SOAP	SIF SOAP: FileService: CheckOut-/CheckIn-operations

Build: 1.0.1.20, release date: 2019-01-23

Changes included	Affects
Support for SubArchive, ClassCodes and RecordType on Document	DocumentService: CreateDocument, UpdateDocument, GetDocuments
New field on user: IsServiceUser	UserService: SynchronizeUser
New field on contact: AlternativeEmail	ContactService: all operations
Support for updating PrivatePerson (REST), and ContactPerson and Enterprise (SOAP and REST)	ContactService: UpdateContactPerson, UpdateEnterprise, UpdatePrivatePerson
Bugfix: now we don't return files that have been deleted.	DocumentService: GetDocuments, FileService: all GetFile-operations
Default skip validation of responsible person being in same organisation as the user performing the operation. The validation can be configured.	CaseService: CreateCase, UpdateCase. DocumentService: CreateDocument, UpdateDocument ProjectService: CreateProject, UpdateProject.
Added support for getting cases by UnofficialTitle.	CaseService: GetCases
New field in DocumentResult: URL	DocumentService: GetDocuments

Build 1.0.1.4, release date: 2018-12-21

Changes included	Affects
Support for nested classes in DefaultValues	CaseService, DocumentService
Added support for getting contacts by Email.	ContactService: GetContactPersons, GetEnterprises, GetPrivatePersons
New operation GetFilesWithMetadata, makes it possible to search for multiple files at once.	FileService

Build 1.0.1.0, release date: 2018-11-30

Changes included	Affects
New fields in GetCasesQuery: CaseType, SubArchive New fields in GetCasesResult: LastChangedDate, SubArchive	CaseService: GetCases
New field in GetDocumentsQuery: DocumentArchive New field in DocumentFileResult: LastChangedDate New fields in DocumentResult: DocumentArchive, SubArchive	DocumentService: GetDocuments

Earlier builds

In November 2018, we changed the way we work with SIF, and we started making a real change log. In the table below, we have gathered some important changes prior to this shift, but the table is unfortunately not complete.

Build	Date	Changes included	Affects
1.0.0.72454	2018-11-06	Exclude class codes (Noark Classification code) connected to expired subarchives when parameter IncludeExpiredValues is set to false.	SupportService: GetCodeTableRows
1.0.0.72423	2018-11-02	Support for fetching cases and documents by multiple contact recnos	CaseService: GetCases DocumentService: GetDocuments
1.0.0.72379	2018-11-01	New fields in CaseEstateResult: STC_PropertyName, STC_PropertyValue New operation GetSIFVersion in SOAP and RPC	CaseService: GetCases SupportService: GetSIFVersion
1.0.0.72248	2018-10-26	New field NumberOfPages	CaseService: GetCases DocumentService: GetDocuments ContactService: All Get-operations
1.0.0.71545	2018-09-12	Support for searching for cases based on contact externalId. Support for AdditionalFields and CustomFields when searching for contacts, and AdditionalFields on synchronizing contacts.	CaseService: GetCases ContactService: Get and Synchronize-methods
1.0.0.71499	2018-09-11	New service: RevisionService New operations: CreateFile, UpdateFile, DeleteFile Updated DocumentService to be able to handle revision archives.	RevisionService FileService DocumentService
1.0.0.71231	2018-08-16	More fields in the subclass DocumentContactResult: ContactRecno, Address, ZipCode, ZipPlace, Country, Email	DocumentService: GetDocuments
1.0.0.70848	2018-07-17	New field AccessGroup	ContactService: all operations
1.0.0.70823	2018-07-11	New field Title on contact	ContactService: SyncPrivateperson, GetPrivatePersons, GetContactPersons
1.0.0.70474	2018-06-22	Moved configuration for MyCases and custom fields from files to settings.	DocumentService: GetDocuments CaseService: GetCases

			MyCasesService: GetMyCases
1.0.0.70392	2018-06-18	SIF REST: Bugfix on GetFileWithMetadata – removed includeFileData from route	SIF REST: files
1.0.0.70108	2018-05-30	Support for searching for estates based on Estate-, Work-, Section-, LeaseHold- and Building-Number.	EstateService: GetEstates
1.0.0.70070	2018-05-28	Added logging for activating and deactivating contacts	ContactService: all sync-operations
1.0.0.69871	2018-05-04	Support for searching for enterprises based on Initials	ContactService: GetEnterprises
1.0.0.69631	2018-04-17	Support for connecting documents and projects to estates	DocumentService: Create-/UpdateDocument ProjectService: Create-/UpdateProject
	2018-03-26	Support for updating PersonalIdNumber and ExternalId on PrivatePerson	ContactService: UpdatePrivatePerson
	2018-03-15	New operation UpdatePrivatePerson	ContactService: UpdatePrivatePerson
	2018-03-08	Bugfix: Searchname gets properly updated	ContactService: all sync-operations
	2018-03-08	Support for getting permissions on document	DocumentService: GetDocuments
	2018-02-22	Logging improvements	ContactService: all sync-operations
	2018-02-05	New field in codetable output: Recno	SupportService: GetCodeTableRows
	2018-01-31	Bugfix: correct saving of responsible person on project	ProjectService
	2018-01-11	Support for updating cases (PUT)	SIF REST: cases
	2017-12-19	SIF RPC officially introduced for 360 Online	SIF RPC
	2017-12-01	New service SupportService with operation GetCodeTableRows officially released	SupportService
	2017-12-01	New services AccessGroupService and MyCasesService officially released	AccessGroupService MyCasesService
	2017-10-17	Bugfix in deployment of SIF REST to always be able to use PUT	SIF REST: documents
	2017-09-20	Bugfix: can return more than one estate connected to a case	CaseService: GetCases
	2017-09-19	SIF REST officially introduced	SIF REST

	2017-08-17	New input fields on GetPrivatePersons: CustomNo1, CustomNo2, CustomNo3, AdditionalFields	ContactService: GetPrivatePersons
	2017-08-09	Support for default values when creating cases and documents	CaseService: CreateCase DocumentService: CreateDocument
	2017-06-30	Support for getting PrivatePersons based on Active and Categories	ContactService: GetPrivatePersons
	2017-06-26	Support for getting documents based on AccessCodeRecno	DocumentService: GetDocuments
	2017-05-04	Support for synchronizing Initials and DirectLine	ContactService: all sync-operations
	2017-05-04	Support for getting CustomFields on documents	DocumentService: GetDocuments
	2017-04-27	New input fields: LastDate, Recno, OnlyPublicInfo, Page, SortingCriterion New result fields: OfficialTitle, CreatedDate, CaseRecno, LastChangedDate	DocumentService: GetDocuments
	2017-04-27	Support for getting CustomFields on cases	CaseService: GetCases
	2017-03-30	New input fields: IncludeCaseContacts, IncludeCaseEstates, IncludeAccessMatrixRowPermissions New result fields: UnofficialTitle, CreatedDate, Notes, CaseTypeCode, CaseTypeDescription, Contacs, ProjectRecno, ProjectName, SubArchive, CaseEstates, CaseRowPermissions	CaseService: GetCases
	2017-03-28	New input fields when getting cases: LastDate, OnlyPublicInfo, SortCriterion	CaseService: GetCases
	2017-03-17	Support for pagination when getting gases	CaseService: GetCases
	2017-03-09	Support for getting cases by Recno Bugfix on CreateCase and CreateProject: verify that a case or project doesn't exist with the given ExternalId.	CaseService: CreateCase ProjectService: CreateProject
	2017-02-13	New operations: CreateProject, UpdateProject, GetProjects	ProjectService
	2017-02-10	Made the Type field optional when syncing Estates, and defaulting it to type Estate (recno:1) if not provided	EstateService: SynchronizeEstate
	2017-02-02	New input fields: FileName, FileFormat	FileService: Upload

	2017-01-31	New service EstateService	EstateService
	2017-01-18	Support for Title on Contactperson	ContactService: SynchronizeContactPerson
	2017-01-16	Added pagination and DateRange-fields	ContactService: all get-operations
	2016-11-28	Support for AdditionalFields when creating File through DocumentService	DocumentService: Create-/UpdateDocument
	2016-11-25	Support for unregistered casecontacts on cases	CaseService: Create-/UpdateCase
